ABSTRACT

Carnavalesque theory has been used as a model and a structure in the works carried out in many fields such as communication, literature, and sociology. In fact, Carnavalesque appears in many environments/areas, particularly in the social networks, which are the manifestation of social life. This chapter examines social networks in the context of carnavalesque theory to reveal facts of carnavalesque in Twitter. Content analysis technique was used in the research. Research data came from 10 Twitter accounts which have a maximum number of followers in Turkey. These data were analyzed and examined in terms of grotesque, dialogism, carnival laughter, upside-down world, marketplace, and marketplace speech belonging to the carnavalesque theory. According to the findings, the structure of Twitter, which is one of the most popular social networks in Turkey, is largely similar to the structure of the carnival and features of carnavalesque theory.

INTRODUCTION

Human beings, who started living in the big communes, have the birth and development of many innovations in social, political, artistic and technological aspects since they have the common mind, the ability to work together and the ability to think and invent individually. These innovations have led to the transformation of the individual and society in many respects. The internet, which is the most recent example of these innovations, has led to the transformation of everyday life in more ways and numbers than ever before although it is included human life into more than half a century ago.
