### ABSTRACT

*Two lines of research focus on this chapter: University Social Responsibility and entrepreneurship. Once Universities are aware of the importance of introducing socially responsible actions, we refer to the need of Universities to foster the creation of new business, establishing the best conditions for entrepreneurs. In this sense, we study what entrepreneurship means and how it is initiated. At the same time, we set the education on entrepreneurship and how gender differences condition the new creation of firms. Some examples of promoting entrepreneurship are discussed, from the initial actions until the maintaining and growing a company already created. Later, chapter concentrates on the particular case of Spanish Universities, offering a lot of actions for the promotion of entrepreneurship, like projects, awards, chairs, masters, conferences and meeting. It is also important to consider the support of public administration and the role of cluster. The chapter finishes with some considerations about spin off, as the result of entrepreneurship from the University.*

### INTRODUCTION

This chapter is focused on two important lines of research today: University Social Responsibility (USR) and entrepreneurship. This way, we are going to refer these two concepts, in order to dip into them in the following pages. First, it is necessary to introduce Corporate Social Responsibility (CSR), a strategy assumed by organizations overall. In this sense, the European Union (EU, 2001) published the report

DOI: 10.4018/978-1-5225-1923-2.ch058

called “*Green Book. Promoting a European framework for Corporate Social Responsibility*”. This is the first document which clearly establishes the content of the CSR, defining it as “the voluntary integration by companies of social and environmental concerns in their business operations and in their interaction with their *stakeholders*” (EU, 2001, p. 20). The same document states the motive of adopting this CSR program by corporations, “contribute to a better society and a cleaner environment” (EU, 2001, p. 5). The definition of CSR has been treated by different sources and it is not exiting a unique idea of what the concept says. Going to the same source, the EU has renewed the previous definitions, pointing, “the responsibility of enterprises for their impacts on society” and making explicit reference to the need for collaboration with *stakeholders* to “integrate social, environmental and ethical concerns, respect for the human rights and consumer concerns into their business operations and core strategy” (EU, 2011, p. 7). This last definition offers the two most important ideas for working in: the responsibility of enterprises and the collaboration with *stakeholders*. We know that enterprises have the responsibility to create employment for improving the economy and it is possible if the collaboration between different agents exists. More definitions have offered a similar sense, highlighting the relationships with partners (De la Cuesta, Valor, Sanmartín, & Botija, 2002; Bell, 2002; Hemming, Pugh, Williams, & Blackburn, 2004).

It is assumed that CSR involves the integration of socially responsible practices in defining organizational strategy (Anderson & Bieniaszewska, 2005; Oskarsson & von Malmborg, 2005; Secchi, 2006). This way, today, as part of its strategy, every organization will provide voluntarily social responsibility information to offer a socially responsible behavior (Gallardo & Castilla, 2007). The adoption of CSR strategy is linked with the culture of the organization and the relationship with *stakeholders*. In this sense, Lyon (2004, p. 136) indicates that the culture of the organization, oriented to CSR, should be directed to the communication to all *stakeholders* of what that considers important.

Once, we have introduced CSR at the level of every organization, we have to particularize on a singular type of institutions. We talk about Universities or Institutions of Higher Education. Last years, the Universities are assuming the integration of CSR in their strategy, what is called University Social Responsibility (USR). According to the University Builds Country Project<sup>1</sup>, USR is the ability of the University, as an institution, to disseminate and implement a set of principles and values, through four key processes: teaching, research, management and university extension. There is no doubt that the commitment to a socially responsible university involves a social transformation, right now the Universities are aware of the changes that must experience, the improvement they must face and the challenges to achieve (Gallardo, 2012). Universities must teach values to achieve a more just society, and the training of professionals in a sensitive reality around them (Gallardo & Sánchez, 2013a, 2013b) in order to get a more balanced and humane society. Vallaeys (2008) indicates that it is the policy of ethical quality of the performance of the university community (students, teachers and staff) through the responsible management of the impacts: educational, cognitive, labor and environmental that Universities are generated, in a participatory dialogue, with society to promote Sustainable Human Development (SHD). In this line, Higher Education Institutions have to work to satisfy the needs of all *stakeholders* who interact with them. Furthermore, based on the philosophy of the *Triple Bottom Line*<sup>2</sup>, they have to work in three dimensions: economic, social and environmental. We can ask, how to achieve the above issues? To do this, Universities have to introduce responsible strategies in four areas of activity: teaching, research, management and projection to society. Gallardo and Sánchez (2013a, 2013b) stated the importance of the participation of all *stakeholders* at the University and seeking transparency in all the actions, and more exactly to orientate teaching and more activities to all *stakeholders*.
