

Chapter 9

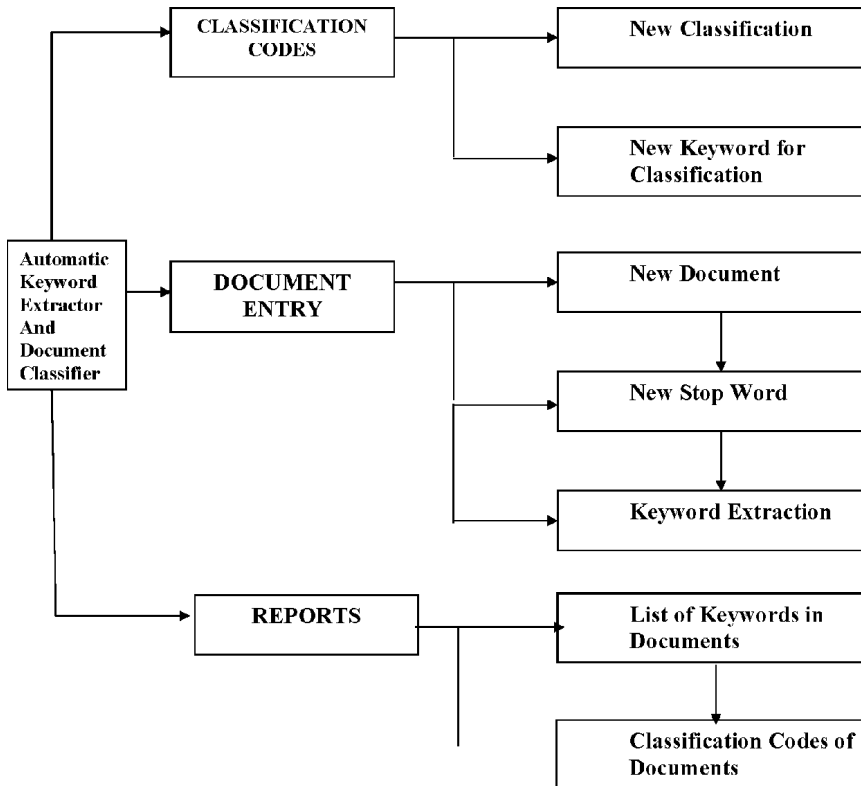

Input Output for Document Classifier

ABSTRACT

The report generated displays a list of automatically generated keywords in each document. A document is allowed to have any number of keywords. As the keywords are getting generated at any pass of the loop, there is no restriction on the width of keywords. Another report is also generated to display the list of the document class. If a document finds its match with more than one class (overlapping classes), the selection of the final class for a document is done on the basis of the maximum weight of the keywords in each class.

MENU DESIGN
